ABOUT ME

Computer Engineering student at UBA and Programming student at UTN. Passionate about technology, with creativity and a quick learning ability. I easily adapt to new environments and enjoy facing challenges that help me grow professionally. I am looking for opportunities to apply my knowledge and continue developing in the IT world.

EDUCATION

Universidad de Buenos Aires

Computer Engineering

March 2025 - Current

Universidad Tecnologica Nacional

University Degree in Programming

March 2024 - Current

Instituto Superior Cultural Británico

English Training - B1

March 2023 - Current

SOFT SKILLS

- Effective Communication
- Teamwork
- Adaptability
- Analytical Thinking
- Creativity
- Problem-Solving

TECH SKILLS

- **Programming Languages**
  C, C++, C#, Python
- **Web Development**
  HTML, CSS, JS, React
- **Tools**
  Git, GitHub, Visual Studio Code, Code::Blocks, PyCharm, Excel, Word, PowerPoint

LANGUAGES

- Spanish (Native)
- English - Intermediate (B1)
- Italian - Elementary (A1)

FEATURED PROJECTS AND EXPERIENCE

Shadows of Laenor

Shadows of Laenor is a role-playing game (RPG) inspired by the dark and challenging atmosphere of Dark Souls and Bloodborne. This project was developed as a final integrative project for the Programming II course, with the goal of implementing advanced programming and design concepts.

- **Technologies:** C++, SFML, Box2D, Piskel, Tiled.
- **Learning:** Object-Oriented Programming - Efficient management of interactions between the player and the environment - Collisions and object dynamics with Box2D.
- Repository

King Training - (*In Development*)

Web Development

I identified that the gym I attend did not have a website, only an Instagram account. I decided to develop a landing page on my own initiative to improve its online presence and facilitate access to key information. Regardless of whether the gym adopts the site, this project allows me to apply and strengthen my web development skills.

- Design and development of a website to enhance King Training Gym's digital presence.
- Implementation of key sections such as home, plans, schedules, activities, and contact.
- Application of technologies such as HTML, CSS, JS, and React, with plans for continuous improvement.

Weather App

Weather App that displays real-time weather conditions based on the city you enter in the search bar, using the OpenWeather API and built with React.

- **Technologies:** HTML, CSS, JS, React, SweetAlert2, OpenWeather API, Node
